

Science

Today interests of educational subject is about ENGLISH, MATHEMATICS, JAPANESE.

I think that one reason is national achievement test.

The members of assembly ask how to teach to the student about English, Math, Japanese.

I want the members of assembly to interest about science and social study, and so on.

As you know national standard curriculum request the importance of ability of application.

I have an idea about educating ability of application.

I think that ENGLISH, MATHEMATICS, JAPANESE are basic skill of research and that Science is general subject.

Science has the sentence, figure, graph, picture etc.

Students study with use observation, writing, drawing, calculate, talking.

So students get the ability of application by studying science.

I insist the importance of studying SCIENCE !
