

Complex

2 years later 2020, new national standard curriculum of elementary school will start completely.

The foreign language education, career education, programming education, etc are so.

Most anxious issue is programming education.

We teachers (school) must follow new national standard curriculum.

So we can use limited classes for programming education.

We educate “thought” to pupils through science, mathematics, general education with a little times using computer.

But recently industrial companies want school to computer’s using programming education.

The school is under MEXT but industrial company is under METI (kei-san-shou).

Oh dear! Which authorities do we follow?

Old time, we Japanese education mistook equipment using education, for example, LL, CAI, etc.

I think that complex education system (situation) makes bad result!

The things we, school can do are limited.
