

Hurry up!

We have only one year until 2020.

New course of study will start completely from 2020.

Programing education will start then.

All elementary schools are preparing new curriculum of programing education.

Have all elementary schools finished making curriculum?

I heard “No”.

Some elementary school have not started at all.

Perhaps teachers worry about using computers and cord.

New course of study about programing education shows that teachers must cultivate

Logical thinking as programing.

What teachers or school must do is “search” and “construction”.

Teachers must search where teachers can teach Logical thinking as programing among all teaching materials.

So teachers must check programing education time on education plans.

And some teachers who can use BASIC cord take charge of programing experience.

I think that preparation is too slow.

Winner is who finished making curriculum and try.

It is OK curriculum is not perfect.

For that reason, there is curriculum management.

Hurry up teachers to do it fast without fear!
