

Rise scholarship

Summer vacation has started.

My neighboring elementary school has supplementary lesson for mathematics etc.

Every year I take part in this lesson as a pupil assisted volunteer.

One pupil mistook many calculations in spite of correct expression.

I watched her notebook.

She wrote calculations with using small words and figures at small space.

Especially reduction (約分) is bad.

She and I were not able to read calculations.

So I gave her one method.

“You had better write LARGE words and figures on WIDE space.”

She tried similar calculation (reduction) and good job.

I saw her good smile and I felt happy.

I think that “rise scholarship” may relate this small advice.
