

## Speaking exercise

As you know, according to new national standard curriculum, you English teachers must use English to teach students.

And you make many opportunities that students speak each other with using English.

So the MEXT has a plan to use AI robot so that communication.

It is difficult to use AI but all school has many computers.

Well, what shall we do?

For example there are many PC at J.H.S.

English teacher and ALT make movies that have some questions to students.

The situations are at town, at station, at shop, at park, etc.

So students use these movies to speak by one-self. (Face to PC)

Next Spring We have National scholarship test.

The speaking test is put in practice with using headphone and microphone.

Last month I talk with university professor who major in educational technology.

He talked me the importance of getting used interface.

English teachers and J.H.S had better use PC for opportunity to speak and get used PC.
