

What do you become able to do?

What does student become able to do?

This is one of new national standard curriculum's aims.

If 1st grade students write Chinese character or calculation on their notebook, mother and father feel happy.

If 2nd-grade students of elementary school studied multiplication table, mother and father feel their children's growth.

It's important that students feel what they can do.

And students feel own growth compare with this fiscal year start.

Who feel accomplishment has motivation of studying.

So we teachers have 3 months until end of fiscal year, teachers must finish this year's all curriculum until last day of March.

And students will proceed next grade or next school.
