

## How to relate with AI

I listened NHK radio on the last day 2017.

The program was about AI.

There was talk with professor, researcher, officer.

Topic of this program is “ AI makes people happy? ”

Today we can see AI ‘s only one face , that is “CHOICE” from many information.

For example, one go to restaurant and say “ I’m fish” .

We understand he order fish dish, but AI understand he is fish (not human being).

I think after listening, we must “INQUIRY”.

Superior of human being is “Interest” and “Try”.

So I think study of school is OK or NOT, with new national standard curriculum.

The most important thing is “BASIC” and “PROBLEM SOLVING”.

Teacher and BOD must watch the move of world carefully !
